

EXPERIENCE**Solutions Engineer Consultant****Deloitte****August 2023 - Present**

- Assessed legacy systems and modernization strategies for clients, identifying operational improvements that generated ~\$9M in annual savings.
- Conducted data analysis using Python and Excel to evaluate asset performance and provide strategic insights to senior leadership.
- Synthesized technical and operational findings into reports supporting business and governance decision-making.
- Coordinated across development, testing, and business teams to translate requirements into implementation strategies for large-scale modernization initiatives.
- Analyzed legislative and policy requirements related to integrated eligibility systems, contributing to implementation planning for HR1-related policy changes.
- Led data quality analysis and developed testing strategies for high-priority system implementations.
- Contributed to 15+ internal policy digest reports analyzing state and federal policy developments and monitoring legislative activity impacting client systems.
- Supported business development by contributing to RFPs and presentations that helped secure new client engagements.
- Monitored state legislative sessions and analyzed high-priority bills affecting integrated eligibility systems to inform client strategy and implementation planning.

Software Engineer Intern**Travelers****June 2022 – September 2022**

- Automated claims workflows using Automation Anywhere 360, improving operational efficiency and reducing manual processing.
- Developed an Outlook add-in supporting the initial phase of claims automation.
- Implemented Okta authentication for a web application deployed on AWS to enhance security and access management.

Frontend Developer**#include****October 2021 – June 2022**

- Developed websites and mobile applications for local businesses to improve digital presence and customer engagement.
- Built frontend components using React, JavaScript, and modern web frameworks.

Undergraduate Research Intern**UC Davis Center for Mind/Brain****May 2020 – January 2022**

- Conducted experimental research analyzing how informational cues influence human decision-making.
- Designed experiments and analyzed behavioral datasets using Python statistical tools.
- Produced insights on how information structures influence decision processes.

EDUCATION**B.S., Computer Science****University of California, Davis****September 2019 – June 2023****LANGUAGES AND TECHNOLOGIES**

- JavaScript, Python, C/C++, MATLAB, R, Java, HTML/CSS, SQL, bash (Linux command line)
- AWS, Node.js, React, Express, Scikit-Learn, Pandas, Flask, Matplotlib, Statsmodels, JupyterNotebook, Scipy, Git, Automation Anywhere 360, Flask, Microsoft SQL Server

CERTIFICATIONS

Amazon Web Services (AWS) Solutions Architect - Associate (2024)

PROJECTS

- **Predicting Student Academic Success (2023).** Pre-processed, cleaned, and applied six different models on a dataset and chose the best model (Logistic Regression K-Fold) to predict the academic success of a student (dropout or graduate) based on various attributes. Created an interactive frontend using Flask to display results.
Technologies Used: Python (Flask, Numpy, scikit-learn, JupyterNotebooks, matplotlib)
- **Effect of Informational Value on Attentional Guidance (2021).** Designed and coded the experiment, collected data, and did the data cleaning, data preprocessing, and data modeling on between-subjects attentional guidance research dataset collected.
Technologies Used: Python (Numpy, scikit-learn, JupyterNotebooks, matplotlib)
