EXPERIENCE

Deloitte, Software Engineer II

August 2023 – Present

- Delivered ~\$9M in savings for state clients by modernizing legacy enterprise systems and collaborating with cross-functional teams to deliver scalable and reliable software solutions.
- Contributed to modernization initiatives for legacy systems, including COBOL-based applications, supporting long-term technology transformation efforts.
- Analyzed system and asset performance data using Python and Excel to generate insights that informed strategic decision-making for senior stakeholders.
- Mentored and trained new team members on mainframe systems, databases, and system architecture, accelerating onboarding and knowledge transfer.
- Interpreted regulatory and policy requirements affecting integrated eligibility systems and translated them into technical implementation plans.
- Led data quality analysis and designed testing strategies to ensure reliability and accuracy of critical system implementations.
- Produced internal policy and system impact reports analyzing legislative changes and their implications for client platforms and infrastructure.
- Supported business development by contributing technical expertise to RFP and oral presentations that helped secure new engagements.

Travelers, Software Engineer Intern

June 2022 – September 2022

- Automated claims workflows using Automation Anywhere 360, improving operational efficiency and reducing manual processing.
- Developed an Outlook add-in supporting the initial phase of claims automation.
- Implemented Okta authentication for a web application deployed on AWS to enhance security and access management.

#include, Frontend Developer

October 2021 – June 2022

- Developed websites and mobile applications for local businesses to improve digital presence

UC Davis Center for Mind/Brain, Researcher

May 2020 – January 2022

- Conducted experimental research analyzing how informational cues influence human decision-making.
- Designed experiments and analyzed behavioral datasets using Python statistical tools.
- Produced insights on how information structures influence decision processes.

EDUCATION

B.S., Computer Science

University of California, Davis

September 2019 – June 2023

LANGUAGES AND TECHNOLOGIES

- JavaScript, Python, C/C++, MATLAB, R, Java, HTML/CSS, SQL, bash (Linux command line)
- AWS, Node.js, React, Express, Scikit-Learn, Pandas, Matplotlib, Statsmodels, JupyterNotebook, Scipy, Git, Automation Anywhere 360, Flask, Microsoft SQL Server

CERTIFICATIONS

- Amazon Web Services (AWS) Solutions Architect - Associate (2024)

PROJECTS

- **NYC Subway Escalator Finder (2026)** Built and deployed an interactive map application to help users search NYC subway stations and identify escalator availability. **Technologies Used:** Python (Pandas, JupyterNotebooks), AWS (S3, Cloudfront, EC2, RDS, ALB), PostgreSQL, Node.js, Express, React, Javascript, CSS
- **Predicting Student Academic Success (2023)** Pre-processed, cleaned, and applied six different models on a dataset and chose the best model (Logistic Regression K-Fold) to predict the academic success of a student (dropout or graduate) based on various attributes. Created an interactive frontend using Flask to display results. **Technologies Used:** Python (Flask, Numpy, scikit-learn, JupyterNotebooks, matplotlib)
- **Effect of Informational Value on Attentional Guidance (2021)** Designed and coded the experiment, collected data, and did the data cleaning, data preprocessing, and data modeling on between-subjects attentional guidance research dataset collected. **Technologies Used:** Python (Numpy, scikit-learn, JupyterNotebooks, matplotlib)
